

## **Summary**

### **MGMT270 Project Management I**

The Project Management I class taught me how to work in a team environment. As a group we dissected a case study to identify the project's scope, constraints, risks, stakeholders, and requirements.

The class also helped to identify necessary skills for a project manager to lead a team and how to use tools to create a list of tasks, a project plan, and network diagrams.

The final project for this class involved an individual project plan for a project of our choosing.
